VIRAAJ VENTURES

Some businesses operate within industries. Some create possibilities across them. At Viraaj Ventures, we bring both together through a growing group companies ecosystem spanning Real Estate, Land & Infrastructure development, IT, Civil Works, Advisory & Consulting, and more. Recognized by the likes of Times of India, Economic Times, Times Realty, Dainik Jagran, and more, we create opportunities for people to grow, contribute and shape the next big thing.

JOB DESCRIPTION

Position: AI Developer

Department: AI & Automation (Product)

Location: Noida

JOB SUMMARY

We are looking for enthusiastic and innovative AI Developers who are passionate about Artificial Intelligence, Generative AI, Large Language Models (LLMs), and business process automation.

You will work on real-world business problems and develop intelligent solutions that integrate with existing CRM, ERP, websites, databases, and internal applications. You will collaborate with business, product, and technology teams to identify automation opportunities, develop AI-powered applications, integrate APIs, and build scalable solutions that reduce manual effort and improve productivity.

This role is ideal for fresh graduates who enjoy solving practical problems, experimenting with emerging AI technologies, and turning ideas into working applications.

KEY RESPONSIBILITY AREAS (KRAs)

- Develop AI-powered applications, assistants, chatbots, and automation workflows.
- Explore Generative AI, LLMs, prompt engineering, Retrieval-Augmented Generation (RAG), and AI agent frameworks.
- Integrate AI solutions with CRM, ERP, property management systems, websites, databases, and third-party APIs.

- Automate repetitive processes such as lead classification, enquiry handling, follow-up reminders, document processing, report generation, and data entry.
- Build intelligent tools for property search, customer query resolution, lead prioritisation, and internal knowledge retrieval.
- Develop and maintain APIs, backend services, and data pipelines for AI-driven applications.
- Work with structured and unstructured data to extract information, identify patterns, and generate insights.
- Test, debug, evaluate, and optimise AI solutions for accuracy, performance, reliability, and cost.
- Collaborate with product owners, business analysts, developers, and operations teams to translate business requirements into practical solutions.
- Document implementations and workflows while following data privacy and security practices.

REQUIRED TECHNICAL SKILLS

- Programming: Basic to intermediate Python; JavaScript or TypeScript is an advantage.
- AI/ML fundamentals: Understanding of AI concepts, machine learning, model evaluation, and data processing.
- Generative AI: Familiarity with LLMs, prompt engineering, embeddings, and AI APIs.
- Backend and APIs: Understanding of REST APIs, JSON, HTTP methods, and API integration.
- Databases: SQL and relational database knowledge, such as PostgreSQL or MySQL.
- Development tools: Git, GitHub, debugging, and software development fundamentals.
- Automation: Interest in workflow automation using Python scripts, automation platforms, or AI agent tools.

PREFERRED SKILLS

Exposure to any of the following will be an advantage. Candidates are not expected to know every technology listed.

- LangChain, LangGraph, LlamaIndex, or similar AI development frameworks.
- RAG, vector databases, and semantic search.
- Workflow orchestration tools such as n8n or similar platforms.
- FastAPI, Flask, Node.js, or other backend frameworks.
- Cloud-based AI services, model deployment, Docker, and CI/CD fundamentals.
- Data analytics, dashboard development, business intelligence, or AI-to-software integrations.

ELIGIBILITY CRITERIA

- B.Tech / B.E. in Computer Science, Artificial Intelligence, Machine Learning, Information Technology, Data Science, or a related discipline.
- MCA, M.Sc. Computer Science, M.Sc. Artificial Intelligence, or other relevant postgraduate qualifications.
- BCA, B.Sc. Computer Science, or related programme candidates may be considered based on programming skills and practical projects.
- Freshers and recent graduates with academic, personal, internship, or open-source projects are encouraged to apply.
- A strong interest in applying AI to real-world business problems is essential.

WHAT WE LOOK FOR

- Strong analytical thinking and problem-solving abilities.
- A practical, solution-oriented approach to technology.
- Willingness to experiment with new AI tools and frameworks.
- Ability to translate business problems into technical solutions.
- Good communication, collaboration, ownership, adaptability, and a continuous learning mindset.

WHY JOIN REALTY ASSISTANT

- Work on real-world AI implementations in the real estate industry.

- Gain hands-on experience with Generative AI, LLMs, APIs, and business automation.
- Collaborate with cross-functional teams and see how technology creates business value.
- Build practical solutions that improve day-to-day operations.
- Develop technical skills through project-based learning and exposure to evolving AI technologies.

SELECTION PROCESS

1. Resume screening and review of academic or personal projects.
2. Technical assessment covering programming, problem-solving, databases, APIs, and AI fundamentals.
